[standing](#) [upright](#)

This upright-standing Easter bunny is designed for easy, support-free 3D printing. Its compact form makes it perfect for springtime decoration, Easter baskets, or seasonal table setups. The model prints in one piece and works well in both matte and silky filaments. Simple to print, fun to display – no supports needed.

Print Instructions

The model was designed to be printed standing upright in the provided orientation. For bedslinger style printers, it makes sense to orient the

bunny so its nose points forward. This will reduce the stress on the model caused by the y-axis movements.

- PLA or PETG
- 0.4 mm nozzle
- 0.2 mm layer height
- 2 perimeters
- 5 % adaptive cubic infill
