I always wanted to have a quick way of sharing my wifi password, so I took an old key and the Wifi logo and created this "Wifi-Key". It has an internal cavity into which you can place an NFC tag mid-print which can then be used to store your wifi - network information. I used the smartphone APP "NFC Tools" but I am sure there are many others which'll work just fine as well.

Have fun using this as a "Hardware WIFI Key"
